

Camille Gruen

Software Engineer

Denver, CO · +1 720 285 0691 · camille.s.gruen@gmail.com · camillegruen.github.io

SUMMARY

Software engineer with eight years building data-heavy products across telecom infrastructure and startups. I work on the interfaces, the APIs behind them, and the pipelines that feed both. I have owned features end to end alongside data science and engineering, built internal tools that teams chose to use, and shipped systems handling global-scale weather data. I am now looking for a role that puts me closer to the people using what I build.

EXPERIENCE

Cloud Engineer · Development Seed

Sep 2025 – Jun 2026

Open-source geospatial and data technology supporting NASA and NOAA programs.

- Improved how researchers reach and receive satellite imagery on NASA's Commercial Satellite Data Program by optimizing tasking workflows and cloud infrastructure spanning multiple commercial satellite providers.

Senior Software Engineer · Tomorrow.io

Nov 2022 – Sep 2025

Weather intelligence helping organizations anticipate weather impacts on operations.

- Owned ingestion, validation, and data-delivery systems end to end, working with engineering and data science to decide what shipped and in what order.
- Designed and built a data validation UI that gave the team direct visibility into data integrity and reshaped daily operational workflows.
- Built and maintained the Rust ingest applications and shared internal libraries the platform runs on, raising throughput and reliability.
- Packaged Terraform into reusable modules and automation scripts so scientists and engineers could deploy their own work without waiting on infrastructure review.
- Directed the platform's migration from GCP to Azure and championed KEDA-based serverless scaling for high-volume global weather ingestion, later moving workloads to ScaledJobs.
- Built the Datadog dashboards and observability practices the team used to catch failures before they reached customers.
- Wrote and delivered the technical enablement material behind integration workflows, ran sprint planning and daily standups, and added RESTful endpoints in Go to an internal notification system.

Software Engineer · Ordermark

Oct 2021 – Jul 2022

Aggregated online ordering providers for restaurants and virtual kitchens into one dashboard and printer.

- Built user profile accounts on Auth0, including the REST APIs other applications and services used to read and update profile objects.
- Wrote back-end logic in FastAPI and integrated SendGrid so the product could reach customers by email.
- Built a queueing system for future ordering with the back-end team, on AWS S3, Lambda, CloudWatch Events, and CloudWatch Alarms.
- Set up Cypress end-to-end testing as a node module running in GitHub Actions, and integrated 42Crunch for continuous automated API security.

DevOps Developer · Shaw Communications

Jan 2020 – Oct 2021

Telephone, internet, television, and mobile services. Denver, CO.

- Moved on-prem services to AWS, building the infrastructure for automation, monitoring, and continuous development.
- Built and maintained automated CI/CD pipelines with CloudFormation, CodeBuild, CodeDeploy, Bitbucket, and Git.
- Removed repeat work for other teams with reusable SNS topics that notified Slack and Teams from any project, and Python scripts that made processes self-healing.

DevOps Engineer · Zayo Group

Jun 2018 – Jan 2020

Fiber and bandwidth connectivity, colocation, and cloud infrastructure. Boulder, CO.

- Built and maintained automated CI/CD pipelines using GitLab, Copado, and PowerShell.
- Built test automation for infrastructure provisioning and supported new and upgraded systems environments through automation tooling.

SKILLS

Languages Rust, Python, Go, SQL

Application REST APIs, FastAPI, React, Auth0, Cypress, JSON

Infrastructure Terraform, AWS, GCP, Azure, Docker, KEDA, Datadog, Linux, Git, YAML

Tools Jira, Figma, Lucidchart

EDUCATION

B.A. Computer Science — University of Colorado Boulder, 2017

WORK AUTHORIZATION

Authorized to work in the US, UK, and EU without sponsorship (American, British, and French citizenship).
